

How it works

The Wedge-It is designed to hold an interior or exterior door open to a 90 degree angle.

It can be placed

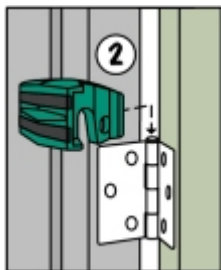

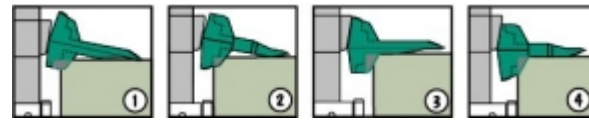

- (1) on top of the door
- (2) over the hinge pin
- (3) or on the floor.

Top of the Door:

With door open to a 90 degree angle place Wedge-It on top of the door between door and door jamb.

Wedge-It is designed with 4 different settings to fit between the top of the door and the door jamb. This is because that distance varies between doors.

Over the Hinge Pin:

With door open to a 90 degree angle place Wedge-It over hinge between door and the door jamb.

On the Floor:

Wedge-It can be used on the floor like a traditional wooden or rubber door stop.

Pivoting glass doors

Wedge-It can also be placed in the opening of metal framed glass doors that pivot at top and bottom or placed on the floor like a traditional door stop.
